SUBJECT: CONGRESS TECHNICAL SPRAY (SI)

TDD No. FI-8705-19

Reference No. \$375MAE3\$1

CERCLIS No. MAD065166647

SDMS DocID 559199

A Site Inspection (SI) for Congress Technical Spray was requested by EPA on May 15, 1987. A Preliminary Assessment (PA) for the Congress Technical Spray Co., located at 401 Broadway road, Dracut, Massachusetts, was completed by NUS/FIT in 1983 and recommended no further action. The facility uses spray paints and halogenated solvents. Halogenated solvents and paint wastes were then stored onsite in drums in designated storage areas prior to their removal by licensed hazardous waste disposal companies. The facility is listed as a waste generator and is in compliance with RCRA waste handling procedures.

Upon review of the file with NUS, no further information concerning waste disposal practices was found in the Department of Environmental Quality Engineering (DEQE) and Environmental Protection Agency (EPA) files. The EPA State Coordinator concurred with the original NUS/FIT PA recommendation that no further CERCLA action was needed at this site. Therefore, NUS/FIT recommends that a site Inspection for Congress Technical Spray Co. not be conducted at this time. This memorandum constitutes completion of all work under this TDD.
